

# SPAR 7

## The belt guide

The SPAR 7 is a master tool designed to track the belt before it comes into contact with the tail pulley. With the SPAR 7, there is no more belt wander at the loading point, and this prevents spillage.

### Product Features:

- ◆ The SPAR 7 is made of two Polyspar guides that keep the return belt in a reversed trough configuration.
- ◆ The SPAR 7 is particularly well-suited to low-speed belts that are difficult to control.
- ◆ The SPAR 7 can be fitted to all belts from 400 to 1200 mm wide.
- ◆ It is recommended that the SPAR 7 not be used for belts with a speed greater than 2 m/s (400 fpm).

The SPAR 7 can be installed on retrofits and new chassis.

No guards required.

The SPAR 7 is particularly effective with belt feeders.
