

SPAR 7

PRODUCT FEATURES

- The **SPAR 7** is made of two Polyspar guides that keep the return belt in a reversed trough configuration.
- The **SPAR 7** is particularly well-suited to low-speed belts that are difficult to control.
- Can be fitted to all belts from 400 to 1200mm wide.
- It is recommended that the **SPAR 7** not be used for belts with a speed greater than 2 m/s (400 fpm).

THE BELT GUIDE

- The **SPAR 7** is a master tool designed to track the belt before it comes into contact with the tail pulley. With the **SPAR 7**, there is no more belt wander at the loading point, and this prevents spillage.

The **SPAR 7** :

- can be installed on retrofits and new chassis
- no guards required
- is particularly effective with belt feeders
