

SPAR AC

PRODUCT FEATURES

- Its swivelling idlers serve as a guide to control the direction of the belt.
- The belt is maintained on its external face by the tracks and is confined by the inside seal plate (SPARGAMAT AC).
- When the belt wanders, it presses on the tracks, the strain then transferred to the idlers causes the unit to swivel, which puts the **belt back on track, no matter its direction.**

AUTO CENTERING LOADING POINT

- Thanks to their innovative design, the swivelling idlers enable the **SPAR AC** to **automatically center the belt under any circumstances.**
- May be used alone or as part of the SPARGAMAT AC for loading points.

The SPAR AC idler is perfect for reversible belt conveyor with low belt speed.

Eliminating the need for manual belt adjustments reduces the risk of accidents.
