VB SPAR

Draining system

DRAINING SYSTEM FOR BELT CONVEYORS

- The VB SPAR is a compact and innovative system, used to drive **rainwater out of belt conveyors**.
- It's equipped with a roller allowing to **drain the belt while running**, which makes water evacuation easier.
- The VB SPAR idlers are equipped with our nip protections SPAR 1.

PRODUCT FEATURES

- The VB SPAR is a belt draining system which can be fitted to any type of belt conveyors.
- Designed for 500 to 1200mm wide belts and beyond on request.
- The design of the articulated arm ensures **good pressure on the belt** and it is held in place by a stopper.

Draining operations are **fast, effective and easy to realize**.

The side rollers have to be placed horizontally, then the articulated arm has to be lowered so the idler pushes the belt edge.

The VB SPAR can be easily locked in position thanks to an **automatic idler blocking system**.
