

# SPARMAT

## PRODUCT FEATURES

- The **SPARMAT** offers three degrees of freedom :
  - **the flexibility of the belt** (due to its position relative to the damping pads)
  - **the chains' vertical movement** when material falls on the pads
  - **the flexibility of the lateral rubber absorbers** placed under the chains
- The **SPARMAT** is available in standard lengths of **1200, 1500 and 1800mm** and in three different versions for **varying lump sizes (up to 500mm)**. For larger lump sizes, consult with us.

## DYNAMIC IMPACT CRADLE

- The **SPARMAT** is made of smooth individual Polyspar blocks linked by steel, forming an innovative alternative to traditional impact cradles. It effectively **absorbs heavy-duty shocks** caused by material landing on the belt at loading points.

The **SPARMAT** eliminates nip points at loading zones.

Thanks to the **SPARMAT** chain system, **adjustments can be made easily, quickly and precisely.**
